## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13, drawn to loading content stored on a data storage unit ("DSU") of a processing system into system memory of the processing system to boot the processing system, classified in class 713, subclass 1.
  - II. Claim 14-23, drawn to determining when a processor of a processing system is in one of a busy wait state and an idle state during a pre-boot runtime of the processing system, and pre-fetching content from a data storage unit ("DSU") of the processing system, classified in class 713, subclass 1.
  - III. Claim 24-31, drawn to a prefetcher agent to request a preemptive load of content from a DSU to a system memory during a pre-boot runtime of a processing system, classified in class 713, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different functions.
